Classical Assignment #7

Johannes Byle

October 27, 2021

1. From Goldstein page 153 we know that we can go from body coordinates to space axes using the following relation $\mathbf{x} = \mathbf{A}^{-1}\mathbf{x}'$. Since $\mathbf{A} = \mathbf{BCD}$:

relation
$$\mathbf{x} = \mathbf{A}^{-1}\mathbf{x}'$$
. Since $\mathbf{A} = \mathbf{BCD}$:
$$\mathbf{BCD} = \begin{pmatrix} \cos(\phi) & \sin(\phi) & 0 \\ -\sin(\phi) & \cos(\phi) & 0 \\ 0 & 0 & 1 \end{pmatrix} \begin{pmatrix} 1 & 0 & 0 \\ 0 & \cos(\theta) & \sin(\theta) \\ 0 & -\sin(\theta) & \cos(\theta) \end{pmatrix} \begin{pmatrix} \cos(\psi) & \sin(\psi) & 0 \\ -\sin(\psi) & \cos(\psi) & 0 \\ 0 & 0 & 1 \end{pmatrix}$$

$$\mathbf{A} = \begin{pmatrix} \cos(\psi)\cos(\phi) - \cos(\theta)\sin(\psi)\sin(\phi) & \cos(\theta)\sin(\psi)\cos(\phi) + \cos(\psi)\sin(\phi) & \sin(\theta)\sin(\psi) \\ -\cos(\theta)\cos(\psi)\sin(\phi) - \sin(\psi)\cos(\phi) & \cos(\theta)\cos(\psi)\cos(\phi) - \sin(\psi)\sin(\phi) & \sin(\theta)\cos(\psi) \\ \sin(\theta)\sin(\phi) & \sin(\theta)(-\cos(\phi)) & \cos(\theta) \end{pmatrix}$$

$$\mathbf{A}^{-1} = \begin{pmatrix} \cos(\psi)\cos(\phi) - \cos(\theta)\sin(\psi)\sin(\phi) & -\cos(\theta)\cos(\psi)\sin(\phi) - \sin(\psi)\cos(\phi) & \sin(\theta)\sin(\phi) \\ \cos(\theta)\sin(\psi)\cos(\phi) + \cos(\psi)\sin(\phi) & \cos(\theta)\cos(\psi)\cos(\phi) - \sin(\psi)\sin(\phi) & \sin(\theta)(-\cos(\phi)) \\ \sin(\theta)\sin(\psi) & \sin(\theta)\cos(\psi) & \sin(\theta)\cos(\psi) & \cos(\theta) \end{pmatrix}$$

$$\omega_{bf} = \begin{pmatrix} \theta'\cos(\psi) + \sin(\theta)\sin(\psi)\phi' \\ \sin(\theta)\cos(\psi) + \psi' \\ \cos(\theta)\phi' + \psi' \end{pmatrix}$$

$$\mathbf{A}^{-1}\omega_{bf} = \begin{pmatrix} \theta'\cos(\phi) + \sin(\theta)\psi'\sin(\phi) \\ \theta'\sin(\phi) - \sin(\theta)\psi'\cos(\phi) \\ \cos(\theta)\psi' + \phi' \end{pmatrix}$$

2. (a) Simply plugging in equation (5.22) from Goldstein into Mathematica:

```
\begin{split} &\text{Clear}[\text{Global*}] \\ &\text{x} = \{\text{r} \; \text{Cos}[\theta], r \text{Sin}[\theta], z\}; \\ &f[j_, k_.] := (x[[1]]^2 + x[[2]]^2 + z^2) \text{KroneckerDelta}[j, k] - x[[j]] x[[k]]; \\ &i[j_-, k_-, \text{ii...}, \text{hf.}] := \text{MIntegrate}[\text{Integrate}[f[j, k]r, \{z, ((\text{hf} - \text{hi})/R)r + \text{hi., hf}\}], \{r, 0, R\}], \{\theta, 0, 2 \text{Pi}\}] \\ &\text{Tensor}[\text{hi...}, \text{hf.}] := \text{Table}[\text{FullSimplify}[i[j, k, \text{hi., hf}]], \{j, 1, 3\}, \{k, 1, 3\}]; \\ &\text{com} = \text{Tensor}[-(3/4)h, (1/4)h]; \\ &\text{origin} = \text{Tensor}[0, h]; \\ &\text{MatrixForm}[\text{com}] \\ &\text{MatrixForm}[\text{origin}] \\ &\text{RVec} = \{0, 0, -3/4\}; \\ &\text{steiner}[j_-, k_.] := (\text{origin}[[j, k]] - M(\text{Norm}[\text{RVec}]^2 \text{KroneckerDelta}[j, k] - \text{RVec}[[j]] \text{RVec}[[k]])) \\ &\text{MatrixForm}[\text{Table}[\text{TrueQ}[\text{com}[[j, k]] = = \text{steiner}[j, k]], \{j, 1, 3\}, \{k, 1, 3\}]] \\ &\text{i.} & \begin{pmatrix} \frac{1}{80}hM\pi R^2 \left(h^2 + 4R^2\right) & 0 & 0 \\ 0 & 0 & \frac{1}{10}hM\pi R^4 \end{pmatrix} \\ &\text{ii.} & \begin{pmatrix} \frac{1}{20}hM\pi R^2 \left(4h^2 + R^2\right) & 0 & 0 \\ 0 & 0 & \frac{1}{10}hM\pi R^4 \end{pmatrix} \\ &\text{ii.} & \begin{pmatrix} \frac{1}{20}hM\pi R^2 \left(4h^2 + R^2\right) & 0 & 0 \\ 0 & 0 & \frac{1}{10}hM\pi R^4 \end{pmatrix} \\ &\text{iii.} & \begin{pmatrix} \frac{1}{20}hM\pi R^2 \left(4h^2 + R^2\right) & 0 & 0 \\ 0 & 0 & \frac{1}{10}hM\pi R^4 \end{pmatrix} \\ &\text{iii.} & \begin{pmatrix} \frac{1}{20}hM\pi R^2 \left(4h^2 + R^2\right) & 0 & 0 \\ 0 & 0 & \frac{1}{10}hM\pi R^4 \end{pmatrix} \\ &\text{iii.} & \begin{pmatrix} \frac{1}{20}hM\pi R^2 \left(4h^2 + R^2\right) & 0 & 0 \\ 0 & 0 & \frac{1}{10}hM\pi R^4 \end{pmatrix} \\ &\text{iii.} & \begin{pmatrix} \frac{1}{20}hM\pi R^2 \left(4h^2 + R^2\right) & 0 & 0 \\ 0 & 0 & \frac{1}{10}hM\pi R^4 \end{pmatrix} \\ &\text{iii.} & \begin{pmatrix} \frac{1}{20}hM\pi R^2 \left(4h^2 + R^2\right) & 0 & 0 \\ 0 & 0 & \frac{1}{10}hM\pi R^4 \end{pmatrix} \\ &\text{iii.} & \begin{pmatrix} \frac{1}{20}hM\pi R^2 \left(4h^2 + R^2\right) & 0 & 0 \\ 0 & 0 & \frac{1}{10}hM\pi R^4 \end{pmatrix} \\ &\text{iii.} & \begin{pmatrix} \frac{1}{20}hM\pi R^2 \left(4h^2 + R^2\right) & 0 & 0 \\ 0 & 0 & \frac{1}{10}hM\pi R^4 \end{pmatrix} \\ &\text{iii.} & \begin{pmatrix} \frac{1}{20}hM\pi R^2 \left(4h^2 + R^2\right) & 0 & 0 \\ 0 & 0 & \frac{1}{10}hM\pi R^4 \end{pmatrix} \\ &\text{iii.} & \begin{pmatrix} \frac{1}{20}hM\pi R^2 \left(4h^2 + R^2\right) & 0 & 0 \\ 0 & 0 & \frac{1}{10}hM\pi R^4 \end{pmatrix} \\ &\text{iii.} & \begin{pmatrix} \frac{1}{20}hM\pi R^2 \left(4h^2 + R^2\right) & 0 & 0 \\ 0 & 0 & \frac{1}{10}hM\pi R^4 \end{pmatrix} \\ &\text{iii.} & \begin{pmatrix} \frac{1}{20}hM\pi R^2 \left(4h^2 + R^2\right) & 0 & 0 \\ 0 & 0 & 0 & \frac{1}{20}hM\pi R^2 \left(4h^2 + R^2\right) \end{pmatrix} \\ &\text{iii.} & \begin{pmatrix} \frac{1}{20}hM\pi R^2 \left(4h^2 + R^2\right) & 0 & 0 \\ 0 & 0 & 0 & \frac{1}{20}hM\pi R^2 \left(4h^2 + R^2\right) \end{pmatrix} \\ &\text{i
```

(b) This array should be all True, but I think I've made a mistake in my definition of the Steiner equation.

3.

4. The kinetic energy will have a term from the translation, which will be a rotation around the apex of the cone. Defining θ as the angle between the cone and the x-axis (the cone is resting on the x-y plane) we get the following translational kinetic energy:

$$V = \dot{\theta} \frac{3}{4} h \cos \alpha$$
$$T = \frac{9}{32} M \dot{\theta}^2 h^2 \cos^2 \alpha$$

For the rotational kinetic energy we need to find the angular velocity which we can define from $\dot{\theta}$:

$$\omega = \frac{4V}{3h\sin\alpha} = \frac{\dot{\theta}\cos\alpha}{\sin\alpha} = \dot{\theta}\cot\alpha$$

Using the moment of inertia tensor derived in the previous problem:

$$I = \begin{bmatrix} \frac{1}{20}hM\pi R^2 (4h^2 + R^2) & 0 & 0\\ 0 & \frac{1}{20}hM\pi R^2 (4h^2 + R^2) & 0\\ 0 & 0 & \frac{1}{10}hM\pi R^4 \end{bmatrix}$$

Substituting $h \sin \alpha = R$:

$$I = \begin{bmatrix} \frac{1}{20}hM\pi R^2 \left(4h^2 + h\sin^2\alpha\right) & 0 & 0\\ 0 & \frac{1}{20}hM\pi h\sin^2\alpha \left(4h^2 + h\sin^2\alpha\right) & 0\\ 0 & 0 & \frac{1}{10}hM\pi h\sin^4\alpha \end{bmatrix}$$

Finding the rotational kinetic energy with $T = \omega \cdot I \cdot \omega$:

$$\begin{split} \omega \cdot I \cdot \omega &= \begin{bmatrix} \dot{\theta} \\ 0 \\ \dot{\theta} \cot \alpha \end{bmatrix} \begin{bmatrix} \frac{1}{20} h M \pi R^2 \left(4 h^2 + h \sin^2 \alpha\right) & 0 & 0 \\ 0 & \frac{1}{20} h M \pi h \sin^2 \alpha \left(4 h^2 + h \sin^2 \alpha\right) & 0 \\ 0 & 0 & \frac{1}{10} h M \pi h \sin^4 \alpha \end{bmatrix} \begin{bmatrix} \dot{\theta} \\ 0 \\ \dot{\theta} \cot \alpha \end{bmatrix} \\ \omega \cdot I \cdot \omega &= \dot{\theta}^2 \frac{1}{20} h M \pi R^2 \left(4 h^2 + h \sin^2 \alpha\right) + \dot{\theta}^2 \cot^2 \alpha \frac{1}{10} h M \pi h \sin^4 \alpha \end{split}$$

The final kinetic energy is then:

$$T = \frac{9}{32} M \dot{\theta}^2 h^2 \cos^2 \alpha + \frac{1}{2} \left[\dot{\theta}^2 \frac{1}{20} h M \pi R^2 \left(4h^2 + h \sin^2 \alpha \right) + \dot{\theta}^2 \cot^2 \alpha \frac{1}{10} h M \pi h \sin^4 \alpha \right]$$
